MR. COFFEE: My name is Frank Coffee,

9 C-O-F-F-E-E.

10 I'm for the repository, although I would like  
11 to see an economic analysis such that we as residents  
12 of the Southern Nevada would be able to get some  
13 compensation or, for that matter, all the residents of  
14 Nevada, because we are taking something that people  
15 don't want to put in their state's backyard and put it  
16 in ours. I recognize this is a proven safe way to  
17 store. However, there is one caveat. I've heard of  
18 transmutation and I would like to see a cost analysis  
19 on that to see if that is another viable way to store  
20 materials and to concert them so the storage time is  
21 less and the radiation hazard is less.
